

**MULTIPLE SLEEVE METHOD AND APPARATUS FOR TREATING
EDEMA AND OTHER SWELLING DISORDERS**

ABSTRACT OF THE DISCLOSURE

An apparatus for applying pressure to a body part comprising: a first sleeve comprising a multiplicity of pressure-applying resilient protrusions configured to apply a therapeutic pressure to a surface of the body part of a patient; and a second sleeve slidably received over the first sleeve, the second sleeve configured to apply a pressure to the first sleeve, thereby increasing the therapeutic pressure applied by the first sleeve on the limb.
